

Lower the Cost of your Pre-Tension Screens

Gerard Daniel's Re-Screening Program

Do you want to reduce the cost of your screens by 25%?

With raw material costs continuing to increase, is your cost of screens rising out of control? With Gerard Daniel's re-screening program, you can re-cycle your screens and save money.

The process

Save your screens. Call us. We will arrange pick-up back to our facility. Using our proprietary mesh removal process, we will remove the epoxy and mesh from the rings, replace it and ship as-new screens back to you. Fig. 1 shows your average cost savings, with the **greatest savings gained with 20 or more replacements.**

Fig. 1 – Cost savings of rescreening

Location	Screen Quantity	Diameter Size	Saving off screen
TX	2	30"	16%
	20	48"	27%
CA	2	30"	16%
	20	60"	27%

Even more benefits

- If you have a new product, or are not seeing optimal productivity, our application engineers can review your requirements and recommend a mesh construction that will work to meet your goals, without having to purchase completely new screens.

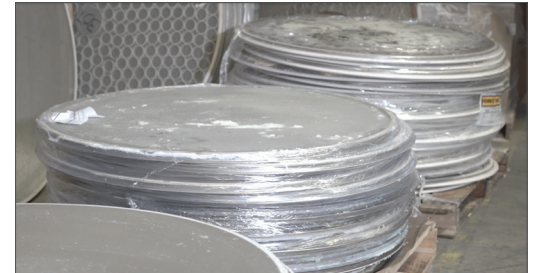

We can also inventory your screens in our warehouse for your convenience. And...since you're not sending your old screens to landfill, **you can rest easy that you are benefiting the planet too.**

Our proprietary cleaning method guarantees 'as new' quality with no compromise to the performance which there can be with other methods.

We also supply vibratory separation machines and stock a full warehouse of spare parts for these machines, including motors. For more information on our separation line, visit our website
